

On the detection of spectral ripples from the Epoch of Recombination

Mayuri Sathyanarayana Rao

Raman Research Institute
Bangalore

Advisory Panel

- Chair Frank Briggs RSAA, ANU
 - Supervisor Ravi Subrahmanyam
RRI, India
 - Advisor Brian Schmidt RSAA, ANU
 - Advisor Charley Lineweaver
RSAA, ANU
- COLLABORATOR** – Jens Chluba JHU, USA

Plan of the talk

- Introduction
- The Epoch of Recombination
- Motivation
- APSERa
- Thesis plan of action

What I mean by 'ripples'

~nK level!!

Cosmic Ionization History

Cosmic Ionization History

A view of the universe

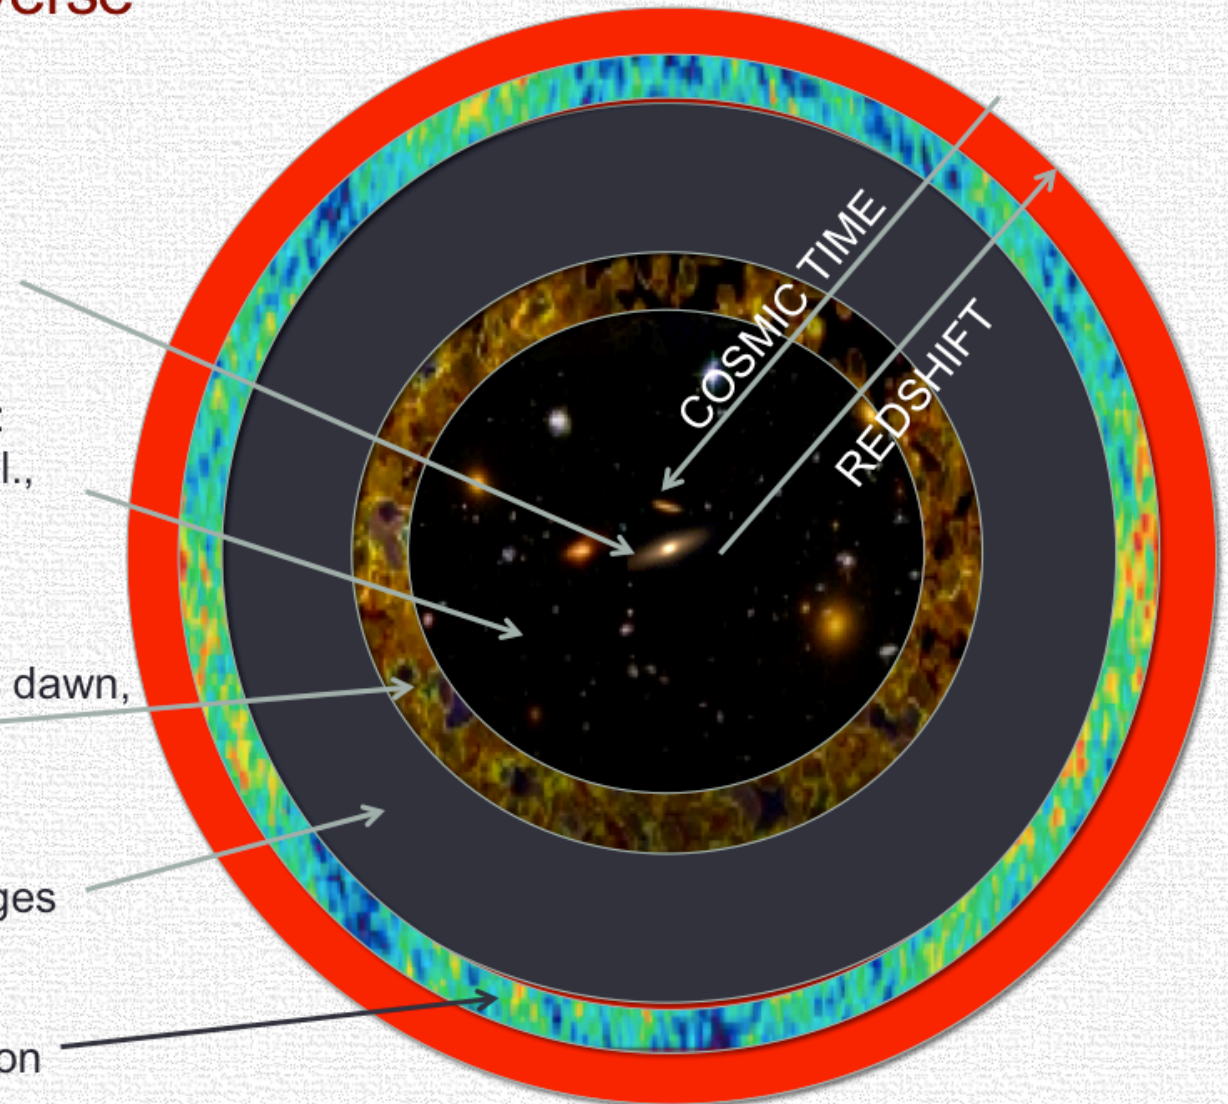

Galactic foreground:
Synchrotron, thermal
($z \sim 0$)

Discrete radio sources:
AGNs, Star-forming gal.,
normal gal.
($z \sim 0-7$)

21-cm from the cosmic dawn,
re-ionization
($z \sim 6-15$)

21-cm from the dark ages
($z \sim 15-150$)

CMB from recombination
($z \sim 1090$)

A view of the universe

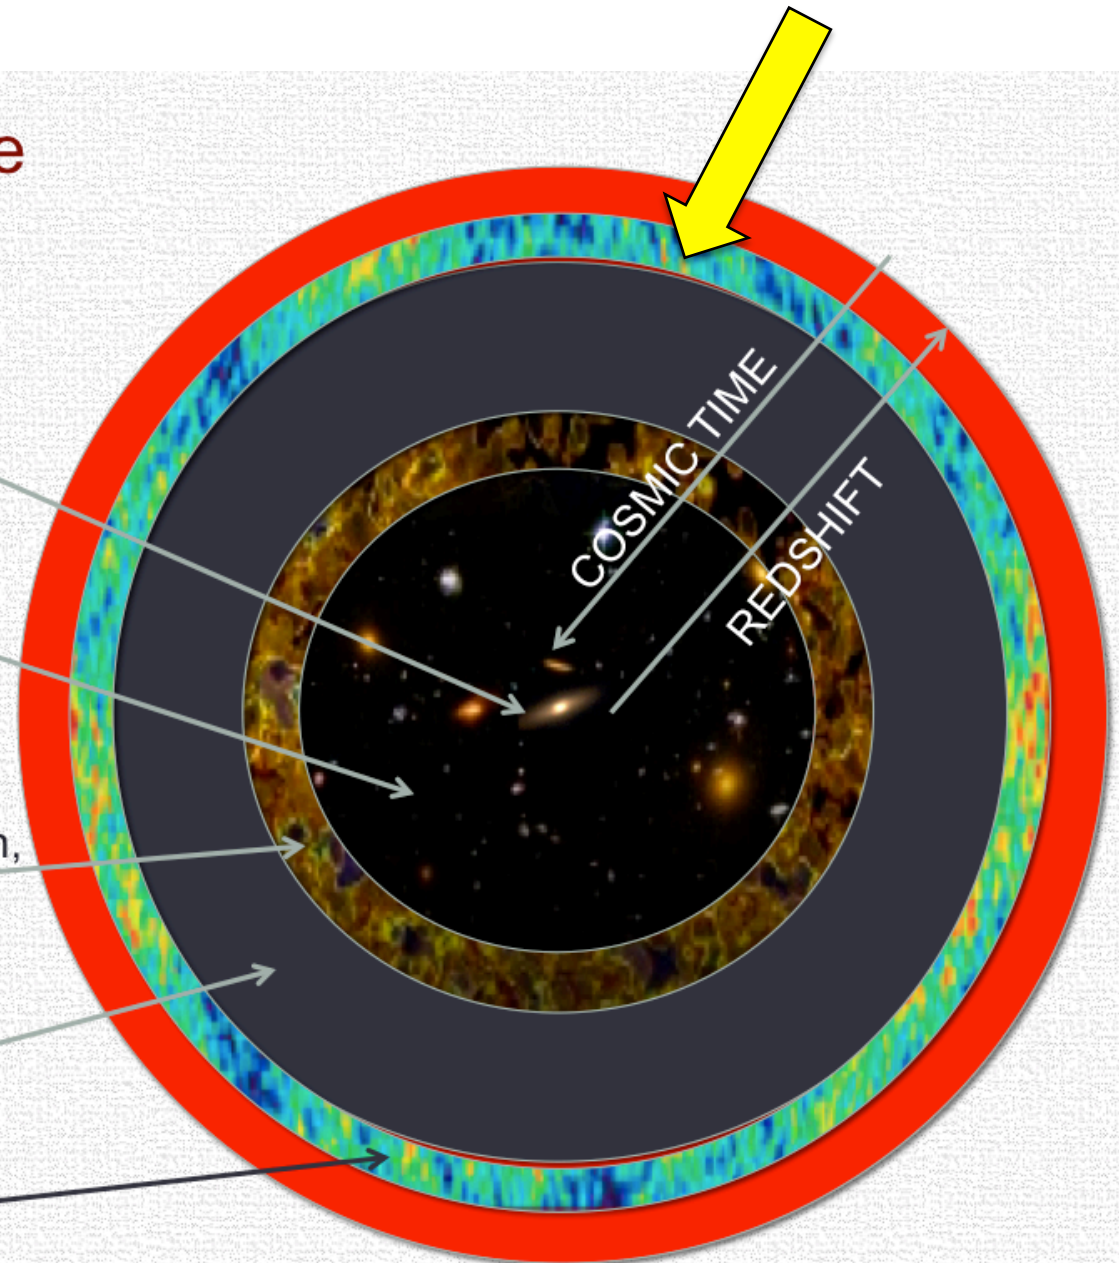

Galactic foreground:
Synchrotron, thermal
($z \sim 0$)

Discrete radio sources:
AGNs, Star-forming gal.,
normal gal.
($z \sim 0-7$)

21-cm from the cosmic dawn,
re-ionization
($z \sim 6-15$)

21-cm from the dark ages
($z \sim 15-150$)

CMB from recombination
($z \sim 1090$)

The CMB spectrum

Thermalization

- Bremsstrahlung

- Compton

- Double Compton

$$z_{\text{th}} = z = 2 \times 10^6 \text{ or } T \approx 5 \times 10^6 \text{ K}$$

Not a perfect blackbody!!

- Small distortions in CMB spectrum are allowed!

The Epoch of Recombination

- What is/was it?

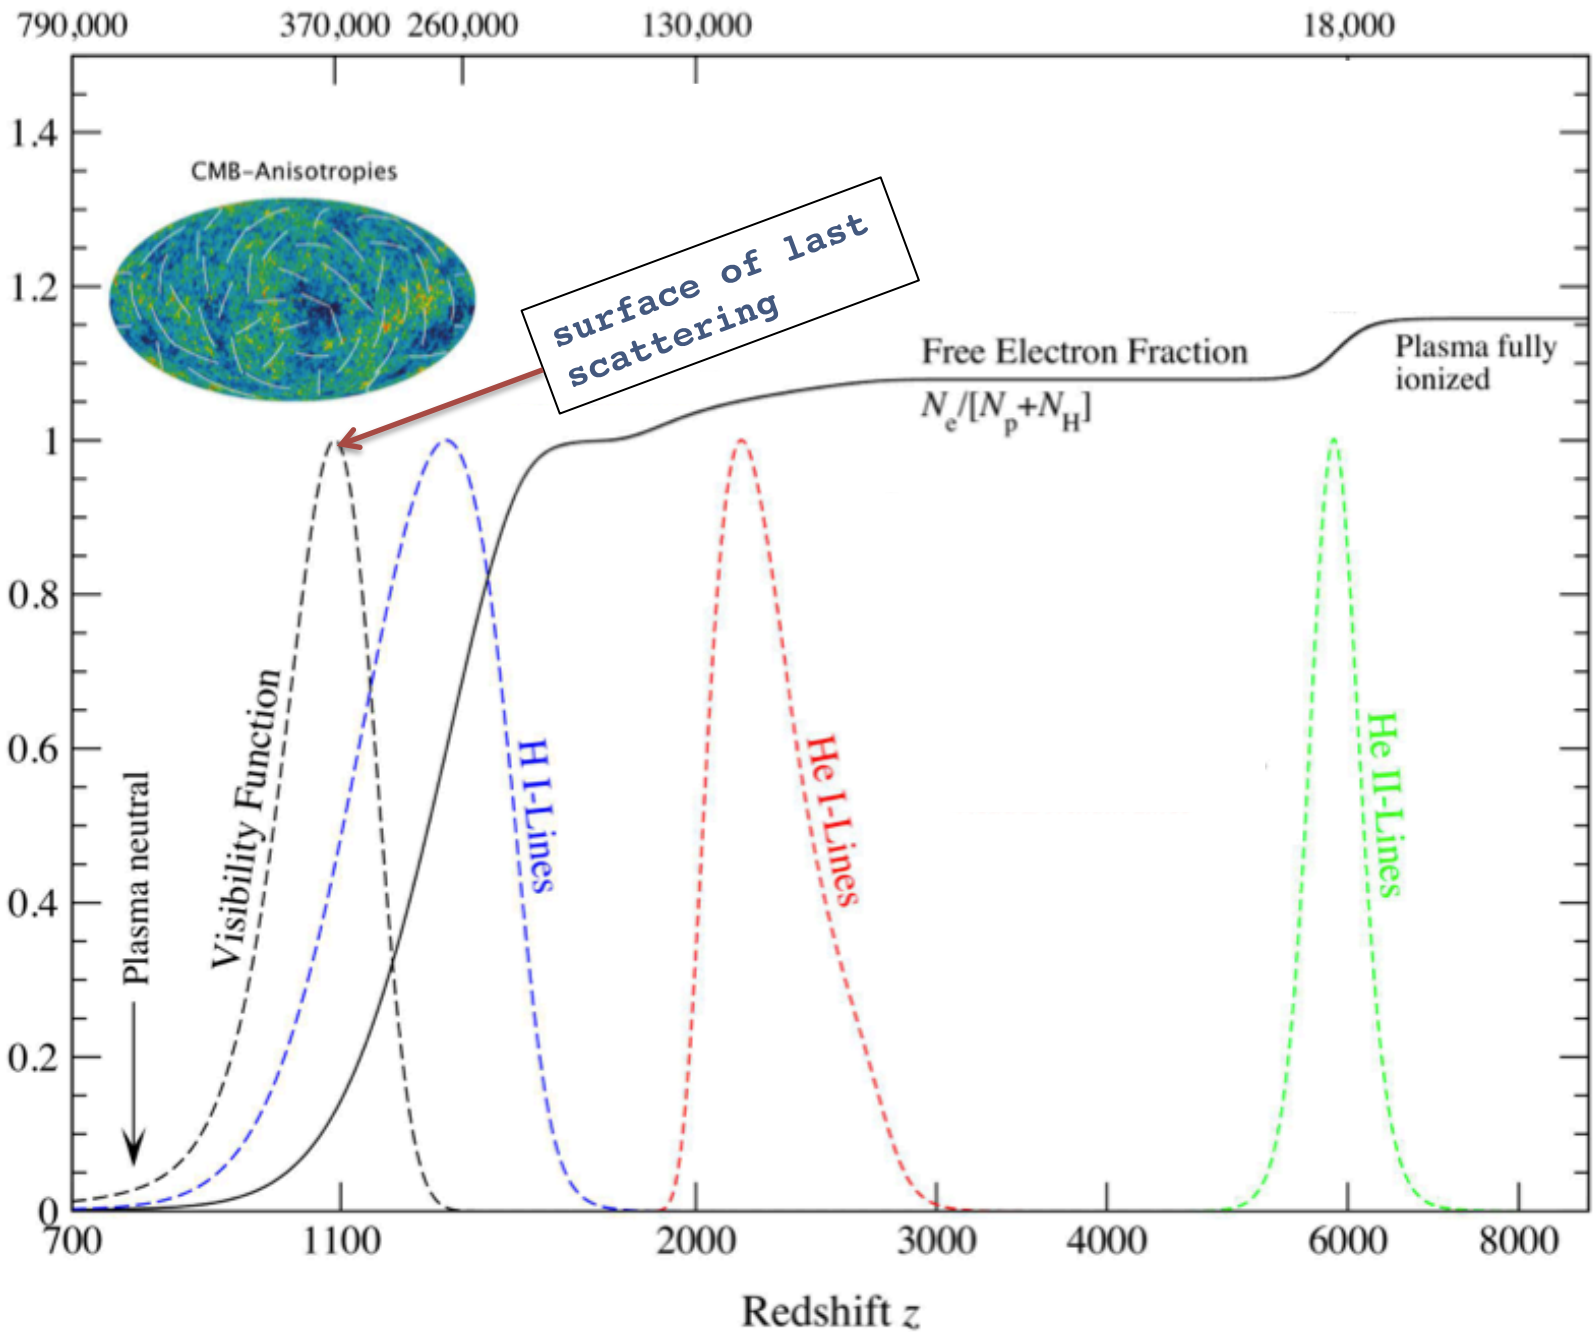

- When was it?

Beyond the surface of last scattering!

Cosmological Time in Years

Conditions during Epoch of Recombination

- $z \sim 1400$
- $T_e = T_\gamma \sim 3815 \text{ K}$
- $n_e = 500 \text{ cm}^{-3}$
- $n_\gamma = 1.1 \times 10^{12} \text{ cm}^{-3}$

Conditions during Epoch of Recombination

- $z \sim 1400$

- $T_e = T_\gamma = 3000 \text{ K}$

LOW BARYON-PHOTON RATIO

- $n_e = 500 \text{ cm}^{-3}$

- $n_\gamma = 1.1 \times 10^{12} \text{ cm}^{-3}$

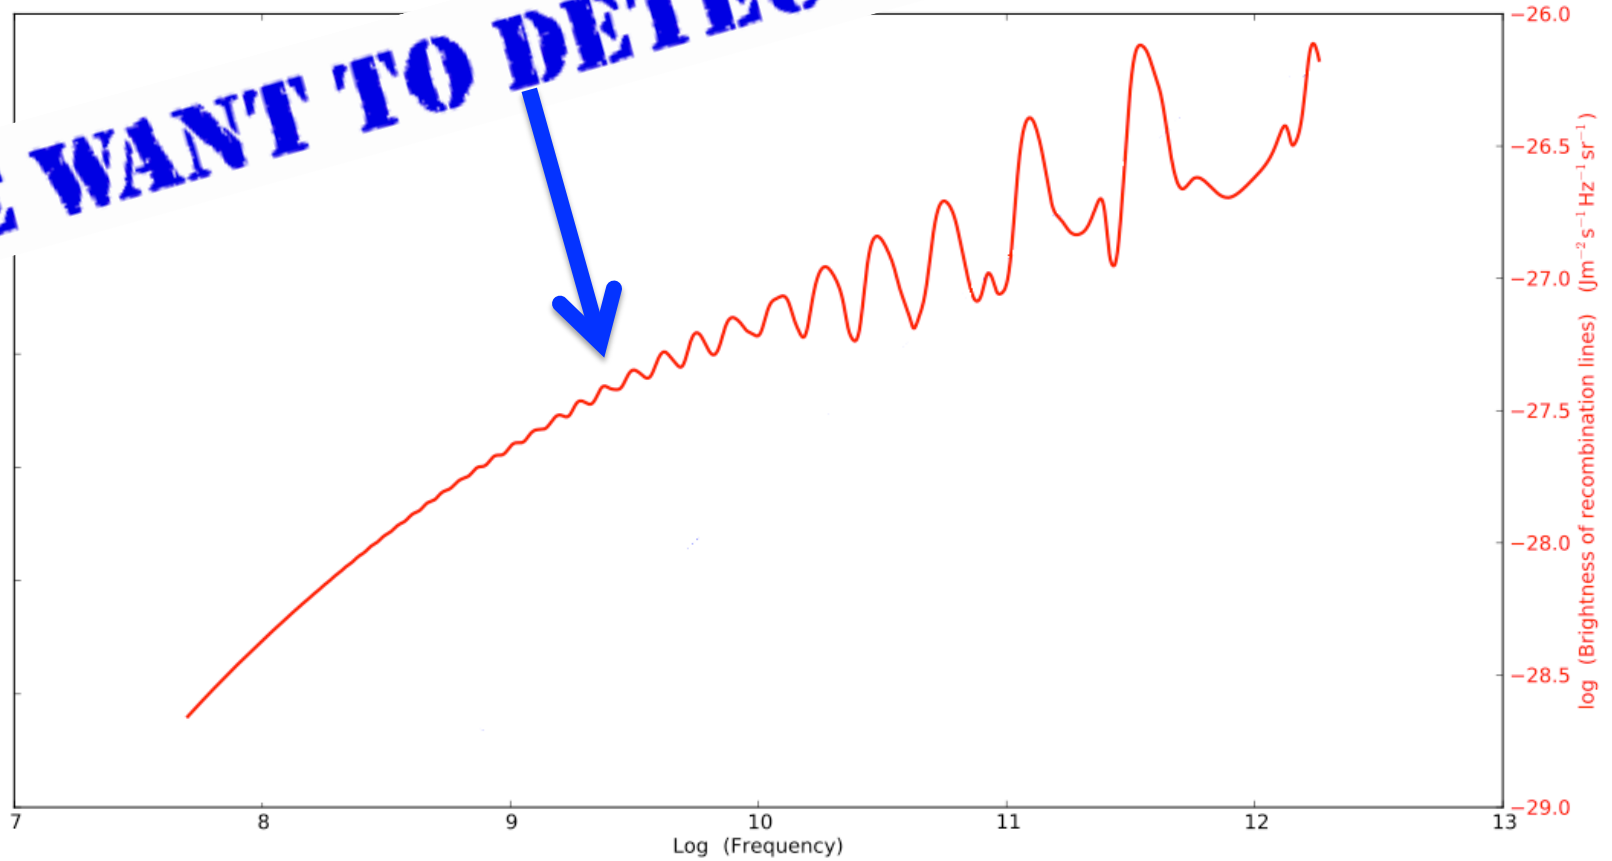

- Recombination occurs at redshifts $z < 10^4$
- Thermalization not effective
- There should be some *small* spectral distortion due to the photons released during recombination!

Predicted recombination lines

Predicted recombination lines

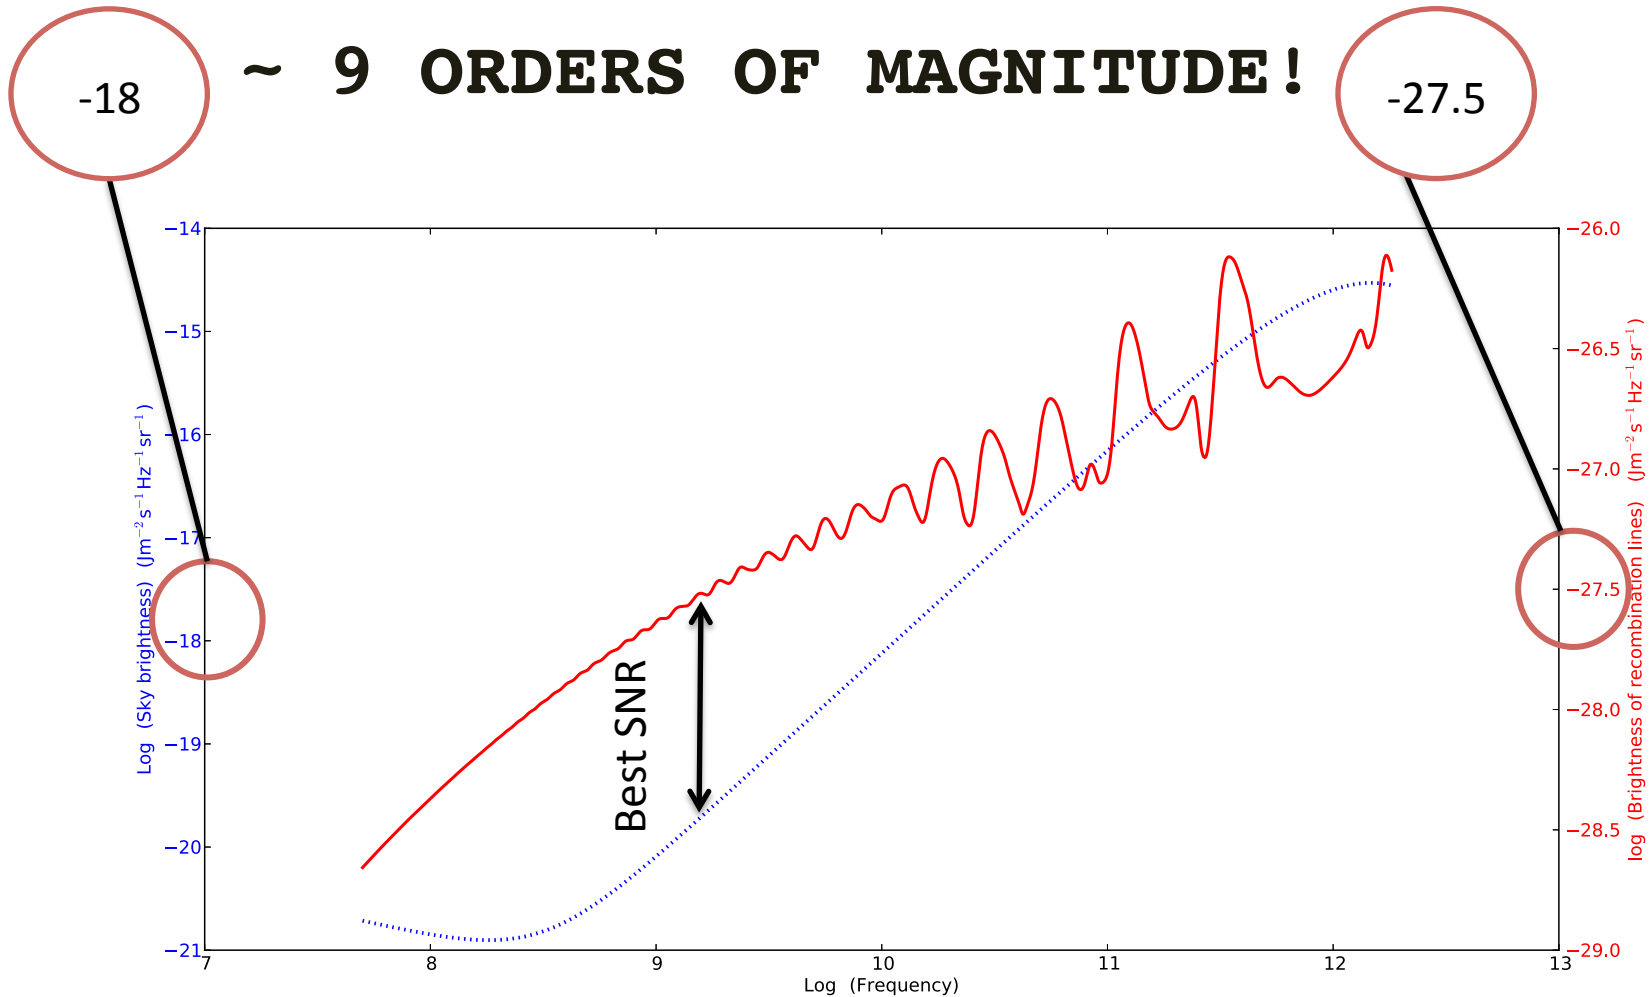

WE WANT TO DETECT THEM!

To get a sense of scale

To get a sense of scale

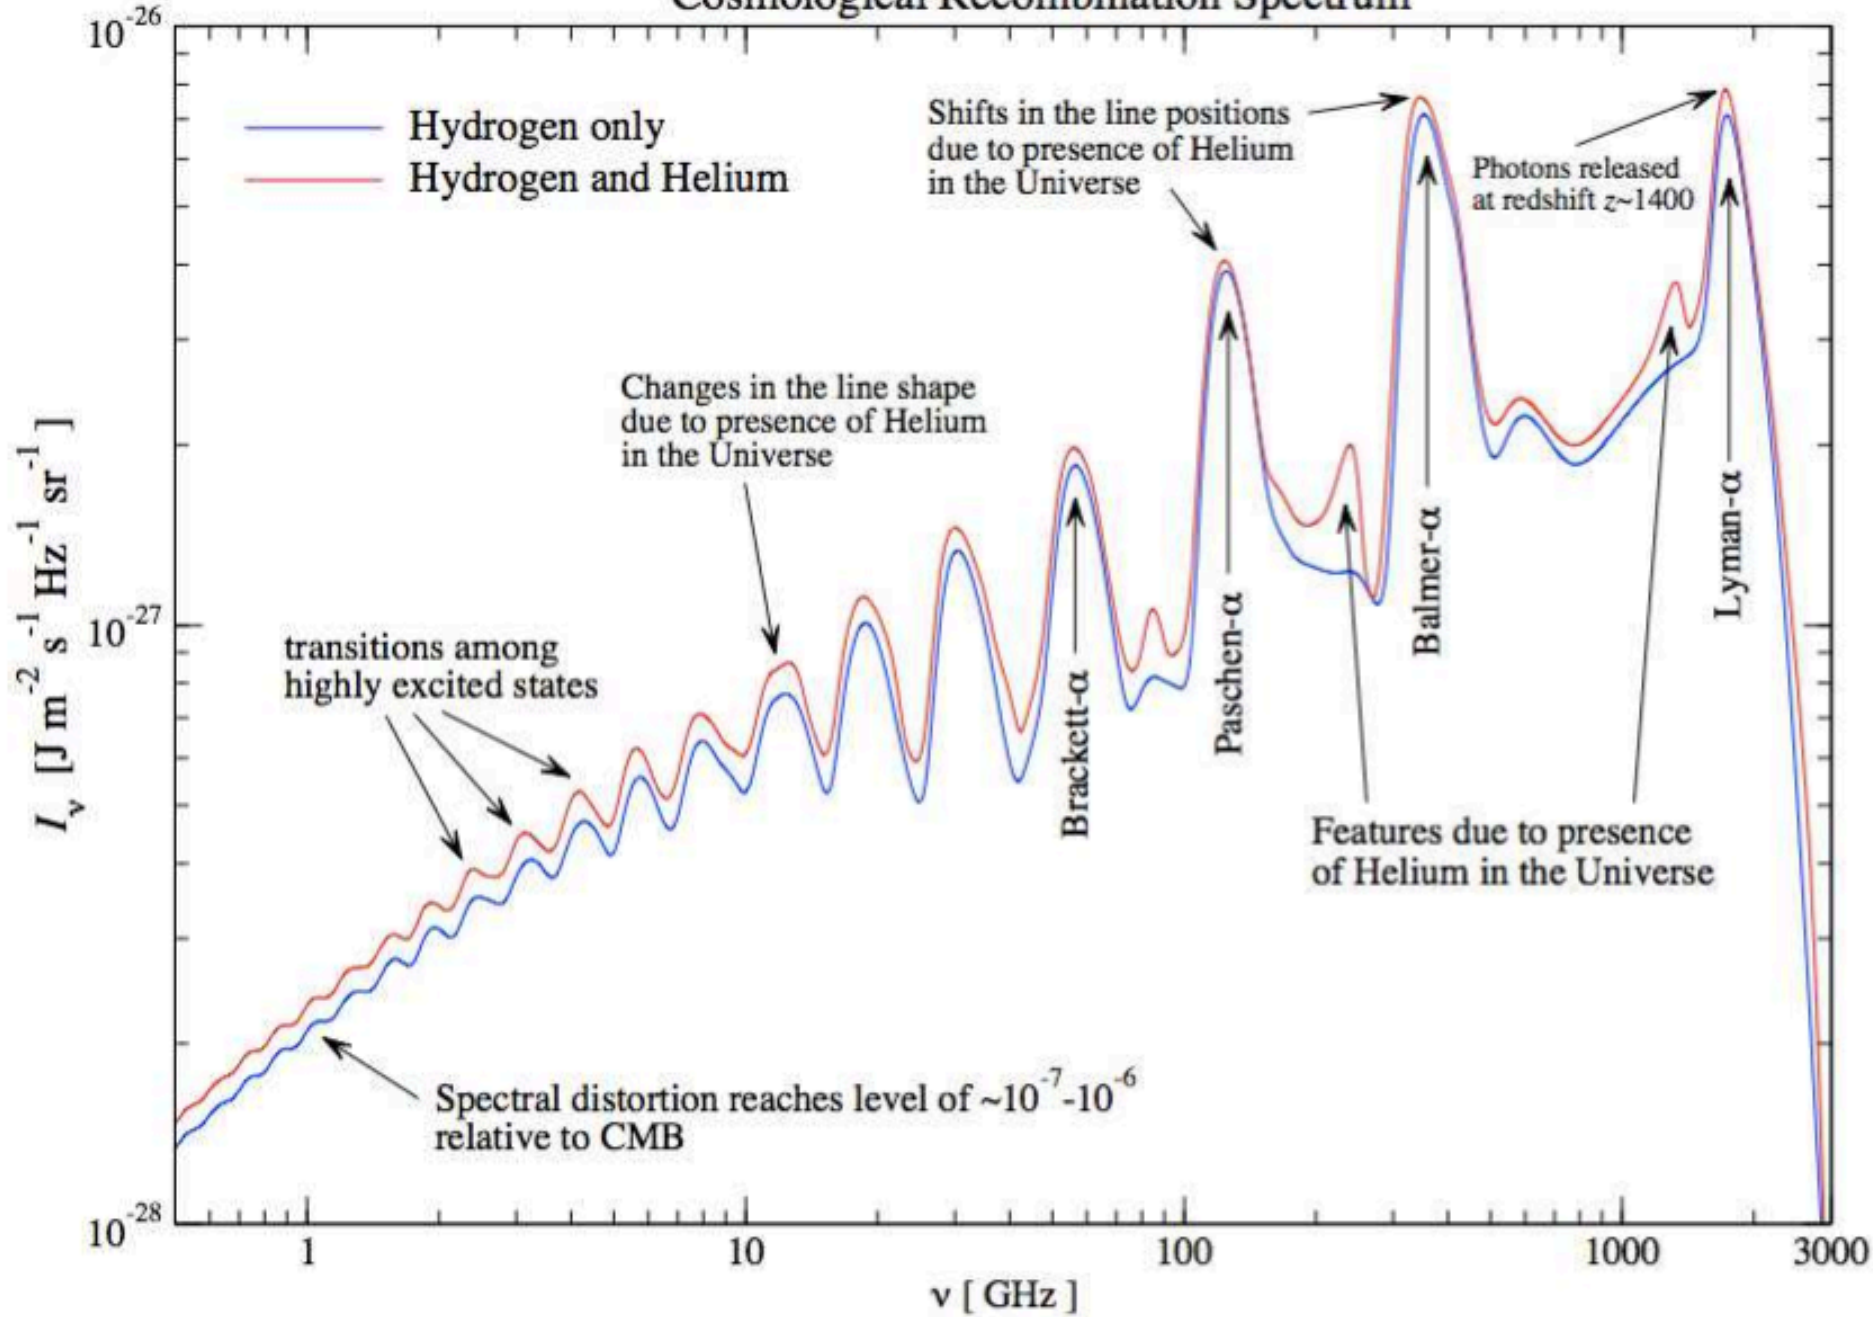

WHY DO IT ?!

- Confront our detailed understanding
- Additional way to determine key parameters of the Universe
 - Pre-stellar Helium abundance!
- Thermal & Ionization history

Cosmological Recombination Spectrum

APSERa

- Array of Precision Spectrometers for the Epoch of RecombinAtion – APSERa
- Array of 128 small telescopes
- 2–6 GHz range
- Radio receivers – designed and built at the Raman Research Institute

<http://www.rri.res.in/apsera>

What we are looking for

Challenges

- It's a tiny signal
- Foreground estimation and subtraction
 - It's a broad signal
- Need to accurately model, estimate systematics –
 - Careful receiver design
 - Intelligent calibration scheme(s)
 - Choice of site – minimal RFI

Thesis plan

- Feasibility Study
- Potential of SKA
- Real-World Issues
- Prototype Design
- Prototype Deployment

Time line

- Feasibility Study -- Mid July 2014
- Potential of SKA -- End December 2014
- Real-World Issues -- End December 2015
- Prototype Design -- Mid July 2016
- Prototype Deployment -- March 2017
